Plant Syst. Evol. 204:109-123(1997).
-!- FUNCTION: One of the primary rRNA binding proteins, it binds directly to 16S rRNA where it nucleates assembly of the body of the 30S subunit (By similarity).
-!- FUNCTION: With S5 and S12 plays an important role in translational accuracy (By similarity).
                                                                                                Haemanthus magnificeas. Chloroplast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  EMBL; Z68235; CAA92533.1; -. SUBCELUUAR LOCATION: Chloroplast.
SIMILARITY: Contains 1 S4 RNA-binding domain.
SIMILARITY: BELONGS TO THE S4P FAMILY OF RIBOSOMAL PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SUBUNIT: Part of the 30S ribosomal subunit. Contacts protein S5. The interaction surface between S4 and S5 is involved in control

Plant Syst. Evol. 204:109-123(1997).
-I- FUNCTION: One of the primary rRNA binding proteins, i directly to 16S rRNA where it nucleates assembly of t the 30S subunit (By similarity).
-I- FUNCTION: With 55 and S12 plays an important role in
"Phylogenetic analysis of Iridaceae with parsimony and distance methods using the plastid gene rps4."; Plant Syst. Evol. 204:109-123(1997).

-!- FUNCTION: With S5 and S12 plays an important role in translat accuracy (By similarity).
-!- SUBUNIT: Part of the 30S ribosomal subunit. Contacts protein The interaction surface between S4 and S5 is involved in cont translational fidelity (By similarity).
-!- SUBCELLULAR LOCATION: Chloroplast.
-!- SIMILARITY: Contains 1 S4 RNA-binding domain.
         "Phylogenetic analysis of Iridaceae with parsimony and dimethods using the plastid gene rps4.";
Plant Syst. Evol. 204:109-123(1997).
-i- FUNCTION: One of the primary rRNA binding proteins,
directly to 16S rRNA where it nucleates assembly of
the 30S subunit (By similarity).

"Phylogenetic analysis of Iridaceae with parsimony and distance methods using the plastid gene rps4";
Plant Syst. Evol. 204:109-123(1997).
-!- FUNCTION: One of the primary rRNA binding proteins, it binds directly to 168 rRNA where it nucleates assembly of the body the 308 subunit (By similarity).
-!- FUNCTION: With S5 and S12 plays an important role in translat accuracy (By similarity).
-!- SUBUNIT: Part of the 308 ribosomal subunit. Contacts protein The interaction surface between S4 and S5 is involved in cont of translational fidelity (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ribosomal

SUBUNIT: Part of the 30s ribosomal subunit. Contacts protein S5.

The interaction surface between S4 and S5 is involved in control of translational fidelity (By similarity).

SUBCELLULAR LOCATION: Chloroplast.

SIMILARITY: Contains 1 S4 RNA-binding domain.

SIMILARITY: BELONGS TO THE S4P FAMILY OF RIBOSOMAL PROTEINS.

Plant Syst. Evol. 204:109-123(1997).
I FUNCTION: One of the primary rRNA binding proteins, it binds directly to 16S rRNA where it nucleates assembly of the body of the 30S subunit (By similarity).
I FUNCTION: With S5 and S12 plays an important role in translation accuracy (By similarity).
SUBUNIT: Part of the 30S ribosomal subunit. Contacts protein S5.

                                                                                                                                                                              accuracy (By similarity).
SUBUNIT: Part of the 30S ribosomal subunit. C
The interaction surface between S4 and S5 is
of translational fidelity (By similarity).
                                                                                                           SUBCELLULAR LOCATION: Chloroplast.
SIMILARITY: Contains 1 S4 RNA-binding domain.
SIMILARITY: BELONGS TO THE S4P FAMILY OF RIBOSOMAL PROTEINS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 17

Plant Syst. Evol. 204.109-123 (1997).

-i- FUNCTION: One of the primary rRNA binding proteins, it directly to 168 rRNA where it nucleates assembly of the the 308 subunit (By similarity).

-i- FUNCTION: With S5 and S12 plays an important role in the accuracy (By similarity).

-i- SUBUNIT: Part of the 308 ribosomal subunit. Contacts professional stranslations surface between S4 and S5 is involved of translational fidelity (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RR4 NERBO

Cill Financy rena binding proteins, it binds directly to 16S rRNA where it nucleates assembly of the body of the 30S subunit (By similarity).

Cill FUNCTION: With S5 and S12 plays an important role in translational accuracy (By similarity).

Cill FUNCTION: By similarity).

Cill FUNCTION: One of the 30S ribosomal subunit. Contacts protein S5.

Cill FUNCTION: One of the 30S ribosomal subunit. Contacts protein S5.

Cill FUNCTION: One of the 30S ribosomal subunit. Contacts protein S5.

Cill FUNCTION: One of the 30S ribosomal subunit. Contacts protein S5.

Cill FUNCTION: One of the 30S ribosomal subunit. Contacts protein S5.

Cill FUNCTION: One of the 30S ribosomal subunit. Contacts protein S5.

Cill FUNCTION: One of the 30S ribosomal subunit. Contacts protein S5.

Cill FUNCTION: One of the 30S ribosomal subunit. Contacts protein S5.

Cill FUNCTION: One of the 30S ribosomal subunit. Contacts protein S5.

Cill FUNCTION: One of the protein S5.

Cill FUNCTION: One of the protein S5.

Cill FUNCTION: One of the binding domain.

Cill FUNCTION: One of the binding domain.

Cill FUNCTION: One of the binding domain.

Le plant Syst. Evol. 204-109-123 (1997).

C -!- FUNCTION: One of the primary rRNA binding proteins, it binds directly to 16S rRNA where it nucleates assembly of the body of the 30S subunit (By similarity).

C -!- FUNCTION: With S5 and S12 plays an important role in translational accuracy (By similarity).

C -!- SUBUNIT; Part of the 30S ribosomal subunit. Contacts protein S5.

The interaction surface between S4 and S5 is involved in control of translational fidelity (By similarity).

C -!- SUBCELLULAR LOCATION: Chloroplast.

-!- SIMILARITY: BELONGS TO THE S4P FAMILY OF RIBOSOMAL PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SOFFICER
                                                                                                                                                                                                                                                            "Phylogenetic analysis of Iridaceae with parsimony and distance
methods using the plastid gene rps4";

L Plant Syst. Evol. 204:109-123(1997).

C -!- FUNCTION: One of the primary rRNA binding proteins, it binds
directly to 16S rRNA where it nucleates assembly of the body of
the 30S subunit (By similarity).

C -!- FUNCTION: With S5 and S12 plays an important role in translation
accuracy (By similarity).

C -!- SUBUNIT: Part of the 30S ribosomal subunit. Contacts protein S5.
The interaction surface between S4 and S5 is involved in control
of translational fidelity (By similarity).

C -!- SUBCELLULAR LOCATION: Chloroplast.

C -!- SIMILARITY: BELONGS TO THE S4P FAMILY OF RIBOSOMAL PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

-!- SUBUNIT: Part of the 30S ribosomal subunit. Contacts protein S5.

The interaction surface between S4 and S5 is involved in control of translational fidelity (By similarity).

-!- SUBCELLULAR LOCATION: Chloroplast.

-!- SIMILARITY: Contains 1 S4 RNA-binding domain.

-!- SIMILARITY: BELONGS TO THE S4P FAMILY OF RIBOSOMAL PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                    methods using the plastid gene rps4.";
Plant Syst. Evol. 204:109-123(1997).
-!- FUNCTION: One of the primary rRNA binding proteins,
directly to 16S rRNA where it nucleates assembly of
the 30S subunit (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                             SEQUENCE FROM N.A.

Evol. 204:109-123(1997).
-!- FUNCTION: One of the primary rRNA binding proteins, it binds directly to 165 rRNA where it nucleates assembly of the body of the 305 subunit (By similarity).
-!- FUNCTION: with S5 and S12 plays an important role in translational accuracy (By similarity).
-!- SUBUNIT: Part of the 305 ribosomal subunit. Contacts protein S5.
The interaction surface between S4 and S5 is involved in control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               O20215;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            80

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a number of prostate-specific sequences derived from the human PS118 gene. These can be used in the detection, monitoring and treatment of prostate diseases, particularly prostate cancer. The present sequence is a PS118 protein fragment of the invention. The coding sequences of the invention were isolated from a prostate tissue expressed sequence tag (EST) library.

A PS118 consensus sequence (see ABA91651) is found at least 12 times more often in prostate than in non-prostate tissue. PS118 polypeptides, polynucleotides, antibodies, agonists and inhibitors are useful for detecting, antibodies, staging, monitoring, prognosticating, preventing and treating (including by genetic immunisation), or determining the predisposition of an individual to, diseases and conditions of the prostate, such as benjgn prostateic hyperplasia, prostaticits, for prostate, such as benjgn prostateic hyperplasia, prostaticits, for prostate, such as benjgn prostateic hyperplasia, prostaticits, and immunogenic peptides are useful for raising PS118-specific antibodies of diagnostic use. The methods and reagents of the prostate and may also provide new markers which can differentiate between the clinically important and unimportant prostate cancers

The clones were identified from a cDNA library made from prostate tumour tissue. Recombinant PS118 protein is used to detect PS118 specific antibodies, to raise antibodies for detection of PS118 antigens, to screen for specific binding agents (potential therapeutics, and to isolate specific antibodies from serum. Detection of PS118 prostatic disease, is used for detection, diagnosis, staging, monitoring and prognosis of used for detection, diagnosis, staging, monitoring and prognosis of potential constatic disease, particularly cancer, and to identify subjects at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a number of prostate-specific sequer derived from the human PS118 gene. These can be used in the detection monitoring and treatment of prostate diseases, particularly prostate cancer. The present sequence is a PS118 protein fragment of the invention. The coding sequences of the invention were isolated from a prostate tissue expressed sequence tag (EST) library.
                   Detecting presence of target PS118 polynucleotide in test sample, useful for detecting, diagnosing, staging, monitoring, prognostic preventing or treating or determining predisposition to prostate
                                                                                                                                                                                                                                                                                                                                                                                           PS118; prostate; marker; prostate cancer; tumour; metastasis; benign prostatic hyperplasia; prostatic intraepithelial neoplasia; prostatitis; human; diagnosis; therapy; vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel PS118 polypeptide for detecting, diagnosing, staging, monitoring, prognosticating, preventing, treating, or determining predisposition of individual to diseases and conditions of prostate, e.g. prostrate

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                prostate than in non-prostate tissue. PSIME polypeptides, including derivatives of the present sequence, polynucleotides, antibodies, agonists and inhibitors are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and treating (including by genetic immunisation), or determining the prostate, such as benign prostatic hyperplasia, prostatitis, prostate, such as benign prostatic hyperplasia, prostatitis, and prostatic intraepithelial neoplasia, prostate cancer, tumours and metastases. The PSIME polypeptides can be produced by expression of PSIME polynucleotides in transfected host cells. The methods and reagents of the invention may provide an early means of detecting diseases of the prostate and may also provide new markers which can differentiate between the clinically important and unimportant prostate cancers without the use of surgery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cc and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags cc for identifying expressed genes. (II) is useful in gene therapy techniques cc (II). (II) is useful in generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as cc a food supplement. (II) and its binding partners are useful in medical cl imaging of sites expressing (II). (I) and (II) are useful for treating cc disorders involving aberrant protein expression or biological activity. Cc The polypeptide and polynucleotide sequences have applications in cc diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and cc produce other types of data and products dependent on DNA and cc amino acid sequences. ABG00010-ABG30377 represent novel human cc diagnostic amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

CC mapping of the human genome. The proteins may be used as molecular weight commarkers, or as nutritional sources or supplements. The proteins may be used as molecular weight commarkers, or as nutritional sources or supplements. The proteins may be used to maintain and expand cell population in a totipotential or cC pluripotential state useful for re-engineering damaged or diseased cC tissues, transplantation, manufacture of bio-pharmaceuticals or the development of bio-sensors. The polynucleotides and proteins are useful for preventing, treating or ameliorating disorders involving aberrant cC protein expression or biological activity, e.g. haematopoietic disorders, central/peripheral nervous system diseases, mechanical and traumatic cdisorders, non-healing wounds, immune deficiencies and disorders, cC infectious diseases caused by viral, bacterial or fungal infection, cC autoimmune disorders, allergic reactions and conditions, coagulation cC assembled from ESTs isolated mainly by sequences of the invention were assembled from ESTs isolated mainly by sequencing by hybridisation, and consecutions, but was obtained from one or more public databases.

CC Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO are from wipo introublehed for sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
Best Local :
New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                         31-MAR-2000; 2000US-0540217.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               hybridisation probes, primers for PCR, for chromosome and gene mapping, for the recombinant production of protein, or in generation of anti-sense DNA or RNA. The polynucleotides are useful in diagnostics as expressed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to novel human coding sequences (ABQ99268-ABQ99608) and proteins (ABP64682-ABP65022). The sequence useful in therapeutic, diagnostic and research methods. The polynucleotides may be used in the field of molecular biology as
